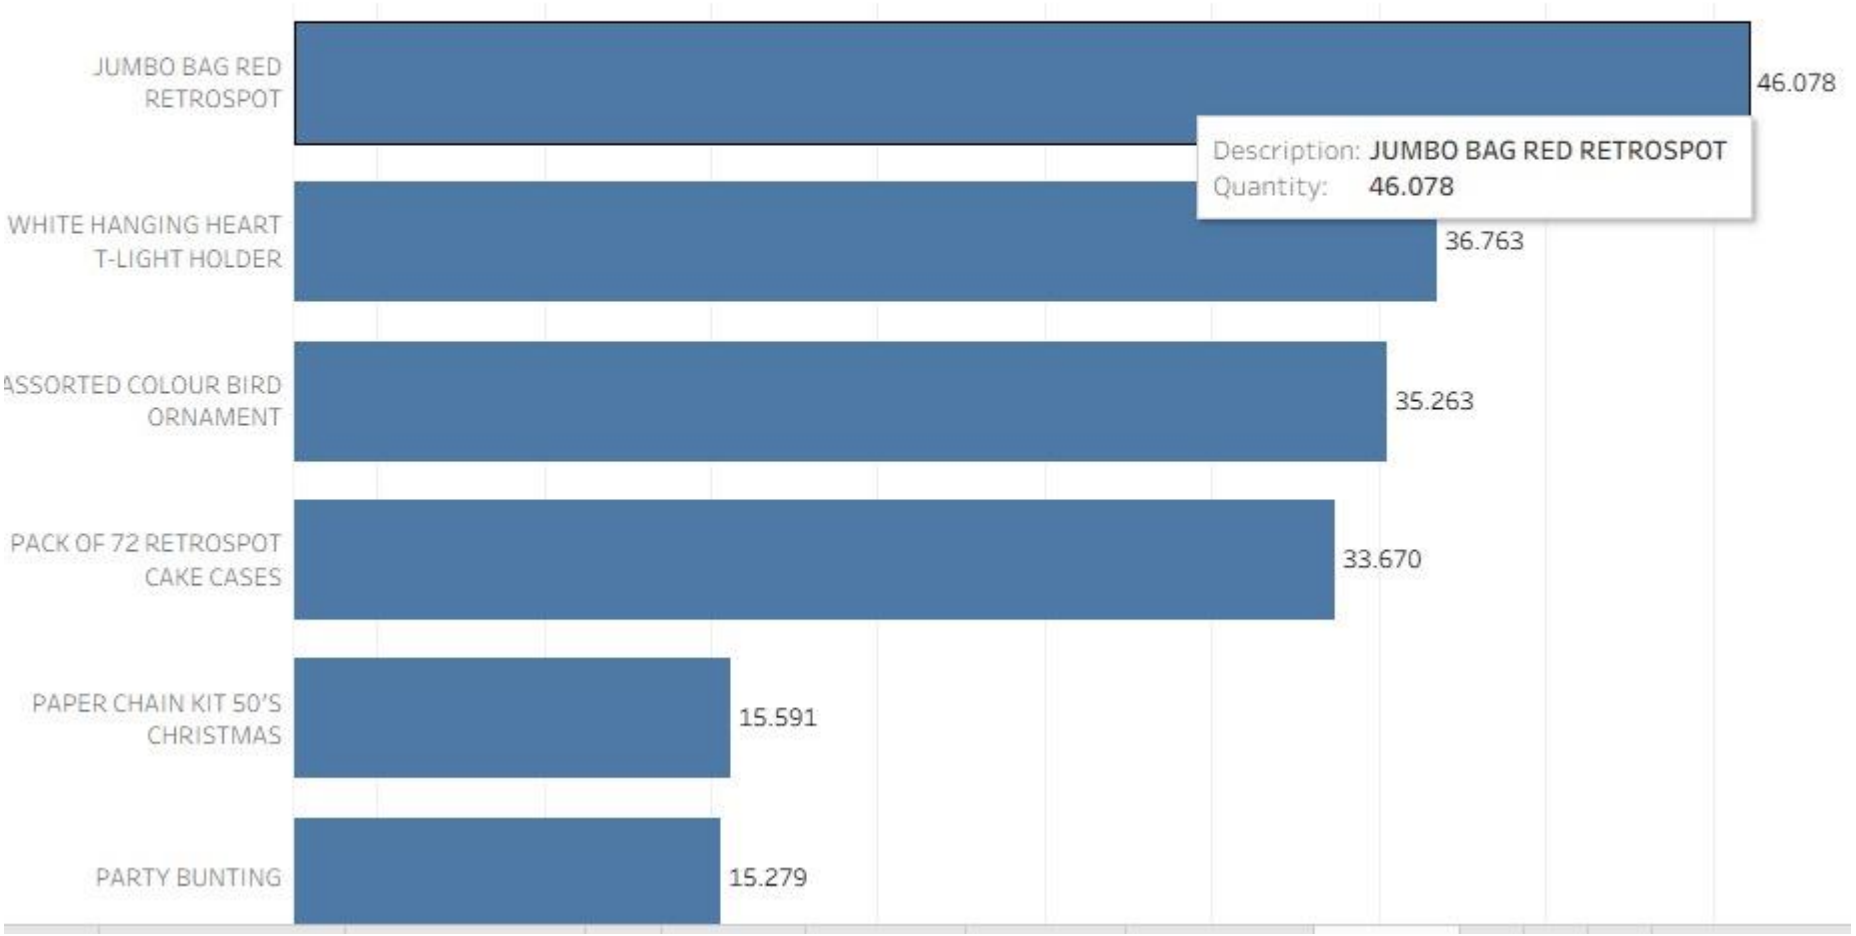
Storytelling Visualization

There was a significant surge in sales volume beginning in September 2011, reaching its peak in November 2011 Rp.1,136,534. This indicates a robust seasonal effect, likely driven by retailers stocking up on giftware in anticipation of major holidays such as Christmas and New Year.
Recommendation: Based on these trends, the company must ensure that inventory levels for "Top 20% Pareto" products are fully optimized by August. Any delay

Sustained Positive Trend: The forecasting model predicts consistent sales growth, reaching a projected Rp 1,905,609 by May 2012.
Recommendation: Given the projected continuous upward trend through April 2012, the company must deviate from previous years' inventory levels. It is imperative to conduct a comprehensive stocktake (stock opname) to ensure supply aligns with this increased demand.

Product Performance: "JUMBO BAG RED RETROSPOT" leads significantly with 46,078 units, followed by "WHITE HANGING HEART," "ASSORTED COLOUR BIRD," and other high-performing items.
Recommendation: Implement rigorous Inventory Control by prioritizing these top-selling products. The company must maintain a zero out-of-stock policy



Revenue Contribution: Customer ID 12346 generated Rp77,184 in revenue, multiple times higher than the second-place customer at Rp4,310.
Recommendation: Our strategic recommendation is to prioritize Key Account Management for high-value clients while executing aggressive market penetration for the second-tier segment to broaden the company's revenue base.

UK Market Dominance: The distinct dark blue shading indicates that the UK remains the most significant revenue driver for the wholesale operation.
Recommendation: With the primary market base located in the UK and Europe, logistics should be centralized in these areas to achieve economies of scale and minimize distribution expenses
